## TRIP GENERATION

The trip generation equations for the proposed warehouse were obtained from the Trip Generation Manual, $11^{\text {th }}$ Edition, an Institute of Transportation Engineers (ITE) Informational Report. The data are categorized by Land Use Codes, with total vehicular trips for a given land use estimated using an independent variable and statistically generated rates or equations.

For the proposed warehouse development, Land Use Code 150 (Warehousing) from the Trip Generation Manual was used to calculate the number of vehicular trips the development will generate during the following time periods: (1) average weekday; (2) weekday A.M. peak hour and (3) weekday P.M. peak hour.

Table 1 shows the trip generation equations and directional split for the analyzed time periods.

|  |  | P.M. Peak Hour | $\mathrm{T}=0.12{ }^{*}(\mathrm{X})+26.48$ | 28\% | 72\% |

## Truck Trips

The truck trip generation for the proposed warehouse development was calculated utilizing Land Use Code 150 from the Trip Generate Manual, $11^{\text {th }}$ Edition. The truck traffic volumes were deducted from the total warehouse trip generation to yield the passenger car traffic volumes. The proposed truck trip generation rates for this analysis are summarized in Table 2.

The calculated trip generation for the proposed development is shown in Table 3.

## TRIP DISTRIBUTION

## New Trips (Passenger Cars)

The distribution of passenger car trips generated by the proposed warehouse development was calculated based on a gravity model of where workers who are employed in the Township reside.

## New Trips (Trucks)

The distribution of truck trips was calculated based on the existing heavy vehicle traffic patterns at the Route 283 interchange. It is anticipated that truck traffic will exclusively use Cloverleaf Road to Route 283 based on the proposed site locations.

The new vehicle trips for the proposed warehouses will be distributed to the local roadway network based on the percentages shown in Table 4

Note: For zip code 17022 (Elizabethtown) trips to/from west were weighted based on travel time/shortest travel path to Elizabethtown. If it is assumed that each route is taken to the

same amount of drive-time. However, the Schwanger Road route includes multiple all-way stop intersections and traffic
Elizabethown College, thus this route is not as desirable as Main 5 .
